

### Amendments to the Claims

Claims 24 and 32 are withdrawn from consideration based on Applicants' response to a restriction requirement submitted November 2, 2006. Please amend claims 23 and 29 and add new claims 33-36.

This listing of claims will replace all prior versions and listings of claims in the application:

1-17. (Previously Cancelled)

18. (Previously Presented) A display device, comprising:

a display panel displaying an image;

a first connecting member attached to a first portion of the display panel;

a first printed circuit board (PCB) electrically coupled to the display panel through the first connecting member, the first connecting member being attached to a first portion of the first PCB;

a second connecting member attached to a second portion of the first PCB; and

a second PCB electrically connected to the first PCB through the second connecting member, the second connecting member attached to a first portion of the second PCB.

19. (Previously Presented) The display device of claim 18, wherein the first connecting member is attached to a first edge of the display panel.

20. (Previously Presented) The display device of claim 19, wherein the first connecting member is a tape carrier package (TCP).

21. (Previously Presented) The display device of claim 20, wherein the TCP comprises an driver integrated circuit (IC).

22. (Previously Presented) The display device of claim 18, wherein the first PCB is a source PCB.

23. (Currently Amended) The display device of claim 22, wherein the first ~~connection~~ connecting member is attached to a first edge of the source PCB and the second ~~connection~~ connecting member is attached to a second edge of the source PCB.
24. (Withdrawn) The display device of claim 18, wherein the second connecting member is a flexible printed circuit (FPC).
25. (Previously Presented) The display device of claim 18, wherein the second PCB is a control PCB.
26. (Previously Presented) The display device of claim 25, wherein the control PCB generates a timing signal for the display panel.
27. (Previously Presented) The display device of claim 18, further comprising a third connecting member attached to a second portion of the display panel.
28. (Previously Presented) The display device of claim 27, wherein the third connecting member is a tape carrier package (TCP).
29. (Currently Amended) The display device of claim 28, wherein the TCP ~~comprising an~~ comprises a driving integrated circuit (IC).
30. (Previously Presented) The display device of claim 27, further comprising a third PCB electrically connected to the display panel through the third connecting member.
31. (Previously Presented) The display device of claim 30, wherein the third PCB is a gate PCB.
32. (Withdrawn) The display device of claim 31, wherein the display device comprises more than one first PCB.
33. (New) The display device of claim 18, further comprising a signal converting unit electrically connected to the second PCB through a third connecting member to convert an

analog video signal externally provided into a digital video signal and provide the converted signal to the second PCB.

34. (New) The display device of claim 33, further comprising a receiving container receiving the display panel, wherein the signal converting unit is closely attached to a rear plane of the receiving container.

35. (New) The display device of claim 33, wherein the third connecting member comprises an upper socket formed on an end portion of the second PCB and a lower socket formed on an end portion of the signal converting unit, the upper socket and the lower socket corresponding to each other.

36. (New) The display device of claim 33, wherein the third connecting member comprises a biting connector formed on an end portion of the third connecting member, the biting connector corresponding to an end portion of the second PCB.
